

CRISIS CASUALTY CARE FOR SCHOOL PERSONNEL

1-Day Crisis Casualty Care for School Personnel

This course is for school nurses, teachers, administration personnel, maintenance/facility staff and faculty. No previous medical training is necessary.

This course will give you and your staff the skills and tactics you can use to save lives and dramatically change the outcome for a critically injured person in less than 60 seconds. When the crisis event occurs, medical first responders are trained not to be present in the danger area until the scene is safe and secure, this could take up to an hour or more.

When a medical emergency occurs, success or failure will depend on the person on the scene, not the professional first responders. Crisis Casualty Care is not a basic first aid course. The concepts presented are based on the most current and innovative techniques currently in use by the U.S. military as dictated by the Tactical Combat Casualty Care model as well as civilian EMS trauma guidelines.

The 8-hour full-day session include:

- What To Do When the Shooting Stops
- Airway Management
- Hemorrhage Control Devices
- Thoracic and Abdominal Trauma
- Basic Medical Equipment and Kits
- Self-Rescue and Partner Rescue
- How to Perform a Physical Exam
- Operating in Low Light
- Sensory Deprived Assessment
- Managing Sensory Overload
- Performing a Hasty Rescue
- Evacuation Platforms for Rescue

What to bring:

- Comfortable clothing suitable for physical activity, movement and simulated rescues
- Knee pads and work gloves
- Hand towel
- High-intensity flashlight that will fit in your pocket (if available)
